Globally recognised health, safety and environmental qualifications

The NEBOSH National Certificate in Construction Health and Safety is a globally recognised health and safety qualification specifically for the construction industry from an established independent examination board.

'With construction workers remaining the most vulnerable to major injury at work along with the high level of risks to those who need to maintain and alter buildings / structures, the NEBOSH Construction Certificate offers a sound benchmark level for all duty holders to demonstrate stage 1 competence.

Theoretical and practical application within the syllabus to manage both health and safety from planning, design and construction to use and demolition, ensures those awarded with the certificate are well capable to meet challenges to make a difference'

John Lacey
Former President and Chairman of
IOSH Construction Group
CFIOSH, HFAPS, FSIA, MASSE

What kind of people take the NEBOSH National Construction Certificate?

The NEBOSH National Construction Certificate is aimed at Supervisors, Managers and CDM co-ordinators within the construction industry who are required to ensure that activities under their control are undertaken safely. It is likely to prove useful for those concerned with the management of buildings who may need to ensure that contractors are working safely.

The qualification is also appropriate for supervisors and managers working in other industries such as utilities, and even broadcasting, where temporary workplaces are a feature of their activities.

What are the benefits for the organisation?

Many larger construction organisations choose the NEBOSH National Construction Certificate as a key part of their supervisory or management development programme. By ensuring that line managers have a sound understanding of the principles of risk management they build an effective safety culture in the company.

Owners or managers of smaller construction companies will find this qualification helps them to meet the requirements of clients and principal contractors when working on other people's premises or sites.

CITB levy payers may be eligible to claim CITB Attendance Grants for the course.

The choice of course format can allow employers to fit training around the needs of the business. Many of NEBOSH's training providers will provide in-company courses that allow for material reflecting the organisation's own systems of work or particular hazards to be included.

Is the NEBOSH National Construction Certificate a recognised qualification?

This qualification is accepted by IOSH – the Institution of Occupational Safety and Health – in meeting the academic requirements for Technician membership of IOSH (Tech IOSH). It is also accepted by the International Institute of Risk and Safety Management (IIRSM) for Associate membership (AIIRSM).

What does the course cover?

It covers a broad range of construction hazards and the means by which they can be controlled. It includes the main legal requirements relating to construction work and enables students to undertake effective safety inspections on a construction site.

Are you already one step towards your NEBOSH National Construction Certificate?

Unit NGC1 (Management of health and safety) is common to the NEBOSH National Construction Certificate, the National General Certificate and the Certificate in Fire Safety and Risk Management, enabling students to combine units across NEBOSH qualifications. Students do not need to re-sit any units already successfully achieved providing they were gained within the last five years.

How is the course assessed?

Candidates are assessed with written examinations for each of the two taught units. A unit certificate is issued denoting successful achievement of each unit. A Certificate parchment is issued on completion of the two units and the practical assessment.
